

M5 Hiper Lipo2500 Transfection Reagent

使用说明书

| 产品名称 | 单位 | 货号 |
|--|---------|---------------|
| M5 Hiper Lipo2500 Transfection Reagent | 0.75 ml | MF135-plus-01 |
| M5 Hiper Lipo2500 Transfection Reagent | 1.5 ml | MF135-plus-02 |

【储存条件】

长期保存，请置于 4°C (切勿结冰冻住)。

【产品简介】

M5 Hiper Lipo2500 Transfection Reagent is a proprietary formulation for transfecting nucleic acids into a wide range of eukaryotic cells. DNA-Lipo 2500 complexes must be made in serum-free medium such as Opti-MEM® Reduced Serum Medium and can be added directly to cells in culture medium, in the presence or absence of serum/antibiotic. It is not necessary to remove complexes or change/add medium after transfection. The amount of Lipo 2500 Reagent required for successful transfection varies depending on the cell type and passage number. Start any new transfection by testing the recommended four concentrations of Lipo2500 Reagent to determine an optimum amount.

【产品组分】

| | MF135-plus-01 | MF135-plus-02 |
|--|---------------|---------------|
| M5 Hiper Lipo2500 Transfection Reagent | 0.75 ml | 1.5 ml |

【实验前准备】

1. Plate cells so they will be 70–90% confluent at the time of transfection.
2. Prepare plasmid DNA-lipid complexes.
3. Add DNA-lipid complexes to cells.

【操作步骤】

A、Lipo2500 DNA Transfection Reagent Protocol (具体方法见后面)

| Component | 96-well | 24-well | 6-well |
|---------------------------------|------------|------------|-------------|
| Final DNA per well | 100 ng | 500 ng | 2500 ng |
| Final Lipo2500 Reagent per well | 0.2–0.5 µL | 1.0–2.5 µL | 5.0–12.5 µL |

B、Co-Transfection of Plasmid DNA and siRNA

Transfect plasmid DNA and siRNA at the same time using Lipo2500 Reagent by adding 30 pmol (~0.6 µg) of siRNA per 1 µg of DNA.

C、mRNA Transfection

mRNA can be transfected in a 24-well plate using Lipo2500 Reagent by adding 0.5–1 µg of mRNA per well.

D、Lipo 2500 DNA Transfection Reagent Protocol (具体方法)

Transfect cells according to the following chart. Volumes are given on a per-well basis. Each reaction mix is sufficient for triplicate (96-well), duplicate (24-well), and single well (6-well) transfections, and accounts for pipetting variations. Adjust the amounts of components according to your tissue culture format. For additional information on scaling your transfection reaction, see page 1.

(Lip2500 使用方法和 Lip2000 完全一样，但是效率更高，对细胞毒性更小)

| Timeline | | Steps | Procedure Details | | | |
|--|---|---|--|------------------------------|-----------------------------|------------------------------|
| | | Component | 96-well | 24-well | 6-well | |
| Day 0 | 1 | Seed cells to be 70–90% confluent at transfection | Adherent cells | $1\text{--}4 \times 10^4$ | $0.5\text{--}2 \times 10^5$ | $0.25\text{--}1 \times 10^6$ |
| | 2 | Dilute four amounts of Lipo2000 Reagent in Opti-MEM® Medium | Opti-MEM® Medium | $25 \mu\text{L} \times 4$ | $50 \mu\text{L} \times 4$ | $150 \mu\text{L} \times 4$ |
| | 3 | Dilute DNA in Opti-MEM® Medium | Lipo2000 Reagent | 1, 1.5, 2, 2.5 μL | 2, 3, 4, 5 μL | 6, 9, 12, 15 μL |
| | 4 | Add diluted DNA to diluted Lipo 2000 Reagent (1:1 ratio) | Opti-MEM® Medium | 125 μL | 250 μL | 700 μL |
| | 5 | Incubate | DNA (0.5–5 $\mu\text{g}/\mu\text{L}$) | 2.5 μg | 5 μg | 14 μg |
| | 6 | Add DNA-lipid complex to cells | Diluted DNA Total | 25 μL | 50 μL | 150 μL |
| | 7 | Visualize/analyze transfected cells | Diluted Lipo 2000 Reagent | 25 μL | 50 μL | 150 μL |
| Incubate for 5 minutes at room temperature. | | | | | | |
| | | Component | 96-well | 24-well | 6-well | |
| | | DNA-lipid complex per well | 10 μL | 50 μL | 250 μL | |
| | | Final DNA used per well | 100 ng | 500 ng | 2500 ng | |
| | | Final Lipo 2000 Reagent used per well | 0.2–0.5 μL | 1.0–2.5 μL | 5.0–12.5 μL | |
| Incubate cells for 1–3 days at 37°C. Then analyze transfected cells. | | | | | | |
